Exercice 2

Exercice 3

Exercice 4

Exercice 5

Exercice 6

Exercice 7

Exercice 8

Exercice 9

Exercice 10

Exercice 1

```
1 COMPTEUR = 0
2
3 def puissance_perso(x: int, n: int) -> int:
4     global COMPTEUR
5     res = 1
6     for i in range(n):
7         COMPTEUR += 1
8         res *= x
9     return res
10
11 puissance_perso(2701, 19406)
12 print("perso: ", COMPTEUR)
```

Code 1 – La fonction effectue 19406 itérations.

Exercice 1

Exercice 2

Exercice 3

Exercice 4

Exercice 5

Exercice 6

Exercice 7

Exercice 8

Exercice 9

Exercice 10

```
1 def puissance_recuratif(x: int, n: int) -> int:  
2     global COMPTEUR  
3     if n == 0:  
4         return 1  
5     else:  
6         COMPTEUR += 1  
7         return x*puissance_recuratif(x, n-1)
```

Exercice 1

Exercice 2

Exercice 3

Exercice 4

Exercice 5

Exercice 6

Exercice 7

Exercice 8

Exercice 9

Exercice 10

Code 2 – La fonction effectue également 19406 itérations.

Remarque

Ne pas oublier de remettre `COMPTEUR` à 0.

```
1 def puissance_recuratif_rapide(x, n):
2     global COMPTEUR
3     if n == 0:
4         return 1
5     elif n % 2 == 0:
6         COMPTEUR += 1
7         return puissance_recuratif_rapide(x*x, n
8 //2)
9     else:
10        COMPTEUR += 1
11        return x*puissance_recuratif_rapide(x*x, n
12 //2)
```

Code 3 – Il n'y a que 15 itérations.
